INTRODUCTION

APPOINTEMENT AND PROCEDURE OF THE COMMISSION

1. Appointment of the Commission. 2. Members of the Commission. 3. Terms of Reference. 4. Procedure of Work. 5. Inauguration. 6. Tour of Universities. 7. General Observations.

1. Appointment of the Commission-We the members of the Commission appointed by the Government of India "to report on Indian University Education and suggest improvements and extensions that may be desirable to suit present and future requirements of the country" have the honour to submit our Report. We are grateful for the opportunity which we were given to survey the work of the universities, to assess their contribution to the educational progress of the nation, to appraise the value of their objectives and achievements and to examine their structure and functions in view of the great changes that have occurred in the political, economic and social life of the country in recent years.

2. Members of the Commission-The scope of our enquiry is set forth in the resolution of the Government of India, Ministry of Education, No. 55-5/47-D/3, dated the 4th November 1948.

The following were appointed members of the Commission:-

1. Dr. S. Radhakrishnan, M.A., D. Litt., LL.D., Spalding Professor of Eastern Religions and Ethics at the University of Oxford. (Chairman).
2. Dr. Tara Chand, M.A., D. Phil. (Oxon.), Secretary and Educational Adviser to the Government of India.
3. Dr. (now Sir) James F. Duff, M.A. (Cantab.), M. Ed. (Manchester), LL.D. (Aberdeen), Vice-Chancellor, University of Durham.
4. Dr. Zakir Hussain, M.A., Ph.D., D. Litt. (Jamia Millia Islamia, Delhi)-(now Vice-Chancellor, Muslim University, Aligarh).
5. Dr. Arthur E. Morgan, D.Sc., D. Eng., LL.D., Former President, Antioch College, First Chairman, Tennessee Valley Authority, President, Community Service Inc.
6. Dr. A. Lakshmanaswami Mudaliar, D.Sc., LL.D., D.C.L., F.R.C.O.G., F.A.S.C., Vice-Chancellor, University of Madras.
7. Dr. Meghnad Saha, D.Sc. F.R.S., Palit professor of Physics Dean, Faculty of Science; and President, Post-Graduate Council of Science, University of Calcutta.

8. Dr. Karm. Narayan Bahl D. Sc (Panj.), D. Phil, and D. Sc.(Oxon), Professor of Zoology, University of Lucknow.

9. Dr. John J. Tigert, M.A. (Oxon.) LL.D., Ed. D., D.C.L., D. Litt., L.H.D., formerly Commissioner of Education of the United States, and President Emeritus of the University of Florida.

10. Shri Nirmal Kumar Sidhanta, M.A. (Cantab.), Professor of English and Dean, Faculty of Arts, University of Lucknow. (Secretary).

3. Terms of Reference-The terms of reference of the Commission were to consider and make recommendations in regard to-

(i) The aims and objects of university education and research in India.

(ii) The changes considered necessary and desirable in the constitution, control, functions and jurisdiction of universities in India and their relations with Governments, Central and Provincial.

(iii) The Finance of universities.

(iv) The maintenance of the highest standards of teaching and examination in the universities and colleges under their control.

(v) The courses of study in the universities with special reference to the maintenance of a sound balance between the Humanities and the Sciences and between pure science and technological training and the duration of such courses.

(vi) The standards of admission to university courses of study with reference to the desirability of an independent university entrance examination and the avoidance of unfair discriminations which militate against Fundamental Right 23 (2).

(vii) The medium of instruction in the universities.

(vii) The provision for advanced study in Indian culture, history, literatures, languages, philosophy and fine arts.

(ix) The need for more universities on a regional or other basis.

(x) The Organisation of advanced research in all branches of knowledge in the universities and Institutes of higher research in a well-co-ordinated fashion avoiding waste of effort and resources.

(xi) Religious instruction in the universities.

(xii) The special problems of the Banaras Hindu University, the Aligarh Muslim University, the Delhi University and other institutions of an all-India character.

(xiii) The qualifications, conditions of service, salaries, privileges and functions of teachers and the encouragement of original research by teachers.

(xiv) The discipline of students, hostels and the Organisation of tutorial work and any other matter which is germane and essential to a complete and comprehensive enquiry into all aspects of university education and advanced research in India.

4. Procedure of Work-We were anxious to receive the help of those who had experience of university education or had shown interest in its problems. A comprehensive questionnaire was circulated to the members of the Constituent Assembly, Premiers and Ministers of Education in the Provinces and States, Vice-Chancellors of universities, Directors of Public Instruction, Heads of Colleges and Heads of Department in universities, educationists, publicists and other prominent men throughout the country. In all about 2,900 copies of the questionnaire were sent out.

Correspondents were invited to submit answers on those aspects of the university problem in which they were specially interested. About 600 replies were received from the people addressed. The very full and varied answers received in response to our enquiry provide an interesting survey of the present conditions of university education. We are grateful to our witnesses and correspondents for their most helpful co-operation.. The Questionnaire and summaries of written memoranda and of evidence are submitted in a separate volume. The publication in extenso of the memoranda and evidence would have required several volumes and might not have added appreciably to the value of the present abridged account. They are, however, sent to the Ministry of Education for purposes of record.

We also obtained from the colleges and institutions of the universities statistical and other information of importance for the consideration of our problem, relating to the number of students, residential accommodation, salaries of teachers, security of tenure, age of retirement, published contributions by the teachers, number of working days etc. We wish to express our thanks to the Vice- Chancellors, Directors of Public Instruction, Registrars, Heads of Colleges, and others for their great courtesy in helping us with this information.

Our recommendations are largely based on the valuable evidence and the constructive suggestions we have received. We have endeavoured to interpret the hopes and ambitions of university men and women and tried to give form to their aspirations and ideals.

5. Inauguration - The Commission held its first meeting in New Delhi on 6th December, 1948, when the Hon'ble Maulana Abul Kalam Azad, Minister for Education, Government of India, addressed the meeting and explained to us Governments' intentions in regard to the purpose and scope of the inquiry.

6. Tour of Universities-After preliminary discussions the members of the Commission visited the different university centres as follows :-

13th to 15th December, 1948	..	Delhi University, Delhi.
19th December 1948 to 2nd January 1949	..	Madras University, Madras.
3rd to 7th January, 1949	..	Osmania University, Hyderabad. (Dn)
8th to 11th January, 1959	..	Nagpur University, Nagpur.
12th to 19th January, 1949	..	Calcutta University, Calcutta and Viswabharati, Shanti-Niketan.
20th to 23rd January, 1949	..	Allahabad University, Allahabad.
24th to 29th January, 1949	..	Lucknow University, Lucknow.
30th January to 2nd February, 1949	..	Muslim University, Aligharh.
9th to 14th February, 1949	..	Calcutta, University, Calcutta.
15th to 17th February, 1949	..	Gauhati University, Gauhati.
18th to 20th February, 1949	..	Patna University, Patna.
21st to 25th February, 1949	..	Hindu University, Banaras.
26th to 28th February, 1949	..	Agra University, Agra.
1st to 4th March, 1949	..	Rajputana University, Jaipur.
5th to 6th March, 1949	..	Ahmedabad.
6th to 12th March, 1949	..	Bombay University, Bombay.
14th to 17th March, 1949	..	Utkal University, Cuttack.
18th to 20th March, 1949	..	Andhra University, Waltair,
22nd to 24th March, 1949	..	Annamalai University, Annamalainagar.
26th to 28th March, 1949	..	Madras University, Madras.

29th to 1st March, 1949	..	Travancore University, Trivandrum.
1st to 2nd April, 1949	..	Mysore University, Bangalore.
3rd to 6th April, 1949	..	Mysore University, Mysore.
6th to 7th April, 1949	..	Mysore University, Bangalore.
11th to 12th April, 1949	..	Saugor University, Saugor.
13th April, 1949	..	Jamia Millia Islamia, Delhi.
29th to 30th April, 1949 Hills).	..	East Punjab University, Solan (Simla
15th to 16th July, 1949	..	Baroda University, Baroda.
17th to 19th July 1949	..	Poona University, Poona.

The names of the universities and the colleges visited and the persons interviewed are found, in Appendix 'A'.

Thus we were able to obtain a great deal of direct knowledge of the working of the universities and colleges. Within the limited time at our disposal, it was not possible for us to visit all the institutions and colleges which we would have wished to, but in the centres which we visited, we had discussions with the Ministers of Education, Vice-Chancellors, Members of the Syndicate (or Executive Council), leaders of public opinion, Principals and Professors and other members of the Staff, met them in small groups and heard their representatives. In many places we met the representatives of the students and acquainted ourselves with their points of view. We are indebted to them for their very helpful attitude.

We are sensible of the inconvenience we caused by our visits to the university authorities and other generous hosts who looked after our comforts wherever we went. We gratefully acknowledge not only the generous hospitality but the enthusiastic co-operation we received from individuals, organisations and agencies, official and non-official. When we are indebted to so many, it will be invidious to mention names but we cannot refrain from mentioning the gracious hospitality extended to us in Government House, Lucknow by Shrimati Sarojini Naidu immediately before her fatal illness.

7. General Observations-We were everywhere struck by a deep general awareness of the importance of higher education for national welfare and an uneasy sense of the inadequacy of the present pattern. While it is generally recognized that the universities should provide the best teaching over the entire field of knowledge of which its own

resources may permit, that they should offer this teaching to the widest range of students irrespective of class, sex, caste or religion, that they should extend by original inquiry the frontiers of learning and, above all, would and shape students not merely by the training of the intellect but by the disciplining of the spirit, university men and women were aware of serious shortcomings in the functioning of the universities in regard to these matters. The wonder is not that the universities have fallen short in many respects, but that they have achieved some measure of success in several directions. But this is no cause for Complacency. The marked deterioration of standards in teaching and examinations and increasing dissatisfaction with the conduct of University administration and elections to university authorities are matters of great concern. The universities as the makers of the future can not persist in the old patterns however valid they may have been in their own day..With the increasing complexity of society and its shifting pattern, universities have to change their objectives and methods, if they are to function effectively in our national life. A Policy of drift in the vague hope that, if the universities are granted autonomy and are permitted to pursue their own ends with intelligence and imagination, higher education will take care of itself, will be dangerous. Automatic, and spontaneous adjustment will not take us to the future we want. We must develop a comprehensive positive policy within the limits of which there should be ample scope for pioneering and experimentation.

It is to the formulation of such a policy that we addressed ourselves after we reached Simla in the third week of A We had to consider the evidence that we obtained in reply to the reply to the questionnaire, discuss questions of principle involved in university re-organisation and set forth the best methods for implementing necessary changes in the present circumstances. The results of our survey are embodied in the Report.

The Commission is indebted to the members of its staff for the loyal and intelligent way in which they have served the Commission.

CHAPTER I HISTORICAL RETROSPECT

1. Higher Education up to 1857

1. Universities in Ancient India. 2. Mediaeval Universities. 3. British Period :Calcutta Madrasah and Banaras Sanskrit College. 4. Parliament Debate of 1793. 5. Grant's Memorandum. 6. Minto, Moira and Rammohan Roy. 7. Bombay: Mountstuart Elphinstone. 8. East and West : Macaulay. 9. Resolution of Bentinck and his Council 10. The work of Christian Missions. 11. The Medium of Instruction and Proposals for Universities. 12. Medical Education. 13. Education in Engineering. 14. Legal Education. 15. World's Despatch of 1854. 16. Establishment of Universities at Calcutta, Bombay and Madras.

II. University Education from 1857 to the present day

17. Development of Universities from 1857-1882. 18. Proposals for New Universities. 19. The Education Commission of 1882. 20. Expansion of Higher Education from 1882-1902. 21. The Universities Commission of 1902. 22. The Universities Act of 1904. 23. A New Political and Economic Consciousness. 24. Government Resolution on Educational Policy in 1913. 25. The Calcutta University Commission. 26. The Rise of New Universities. 27. The Inter-University Board. 28. The Auxiliary Committee of the Indian Statutory Commission. 29. The Report of the Central Advisory Board on Educational Development.

I-Higher Education up to 1857

1. Universities in Ancient India-The universities of modern India owe very little to our ancient or mediaeval centres of learning but one must not forget the existence of such centres since very early times. The parishads or assemblies of Brahmans learned in the Vedas and Dharma Sutras probably attracted a number of students desirous of acquiring knowledge like Svetaketu in the Chandogya Upanishad. Later there grew up well organised centres of learning of which the most famous were Taksasila and Nalanda. One of the Jatakas relates the story of the sixteen year-old son of the King of Banaras who went to distant Taksasila, with a thousand pieces of gold, the fee for his teacher who was to take him through the various branches of learning. The curriculum at Taksasila appears to have included the Vedas and the Vedangas as also the eighteen arts which comprised of medicine and surgery, astronomy and astrology, agriculture and accountancy, archery and snake charming. Students at Nalanda often spent as many as twelve years studying the Vedas and the Upanishads, the works of Mahayana Buddhism and Jainism, the systems of philosophy and logic. Nalanda was a Buddhist centre but, the atmosphere and work of the institution appear to have been very similar to those of the Hindu centres, with a close relationship of the teacher and pupil, with individual instruction diversified by public discussions. Taksasila probably flourished as an educational centre till the fifth century A.D. while Nalanda was destroyed towards the close of the twelfth century. Vallabhi in Kathiawad and Kanchi in the south were great centres of learning about the same time as Nalanda. Of Vikramasila and Odantapuri in Bihar we know much less, but Nadia in Bengal continues its traditions down to the present day. Here the students specialised in logic, but law and grammar were also studied.

2. Mediaeval Universities-While some of those Hindu centres of learning in the East and the South continued their work throughout the middle ages, the Mohamedan rulers encouraged the establishment of colleges (madrasahs) at places like Lahore, Delhi, Rampur, Lucknow, Allahabad, Jaunpur, Ajmer and Bidar. Sher Shah who later became emperor was a student at Jaunpur, and among the subjects he studied there were history and philosophy, Arabic and Persian literature. The curriculum of these colleges paralleled the trivium and quadrivium of the European institutions and included grammar, rhetoric, logic and law, geometry and astronomy, natural philosophy, metaphysics and theology while poetry was a source of pleasure to all. Most of the important institutions attempted

to specialize in one or more branches of knowledge as Rampur did in logic and medicine, Lucknow in theology and Lahore in astronomy and mathematics. The medium of instruction was mainly Arabic and there were many famous scholars in Arabic, teaching in the institutions of higher learning. While most of these institutions have disappeared, some still carry on the traditions of the old Madrasahs.

3. British Period : Calcutta Madrasah and Banaras Sanskrit College-When Muslim rulers were replaced by the British, the latter felt the need of doing something for the education of the people and one of the noteworthy acts of Warren Hastings, the first Governor- General, was to establish the Calcutta Madrasah which was intended "to qualify the sons of Mohamedan gentlemen for responsible and lucrative offices in the State" and the course of studies followed the traditional pattern embracing theology, logic, rhetoric, grammar, law, natural philosophy, astronomy, geometry and arithmetic. A few years later John Owen, Chaplain to the Bengal Presidency, requested the Government to establish schools for the purpose of teaching English "to the natives of these provinces." The administrators do not seem to have paid much attention to this and when the next important educational institution was established a few years later at Banaras, it was "for the preservation and cultivation of the Laws, Literature and Religion of the nation, to accomplish the same purpose for the Hindus as the Madrasah for the Mohamedans and specially to supply qualified Hindu assistants to European Judges."

4. Parliament Debate of 1793- In 1792-93 when the House of Commons debated the renewal of the East India Company's Charter, Wilberforce, the leader of the evangelical party carried a resolution emphasizing the adoption of such steps as would lead to the advancement, in useful knowledge of the inhabitants of British India and moved that in order to attain this object the Court of Directors should be commissioned to send out from time to time schoolmasters and missionaries. Wilberforce's move was vigorously opposed by people who urged that the Hindus had "as good a system of faith and morals as most people" and that it would be madness to give them any kind of learning other than what they possessed. One of the Directors is further reported to have observed that "they had just lost America from their folly in having allowed the establishment of schools and colleges and it would not do for them to repeat the same act of folly in regard to India".

5. Grant's Memorandum- A few years later Charles Grant who was one of the Directors of the East India Company submitted to the Company a memorandum in which he lamented the low moral conditions of the people of India and exhorted the Company to improve it by imparting to them a knowledge of the English language to serve as "a key which will open to them a world of new ideas". He referred to what had been done by the Muslim-rulers employing the Persian language and teaching their subjects to use it. To quote his words: "It would be extremely easy for Government to establish, at moderate expense in various parts of Provinces, places of gratuitous instruction in reading and writing English, multitudes, especially of the young, would flock to them and the easy books, used in teaching, might at the same time convey obvious truths on different subjects..... The Hindus would, in time, become teachers of English themselves, and the employment of our language in public business, for which every political reason remains

in full force, would, in the course of another generation, make it very general throughout the country. There is nothing wanting to the success of this plan but the hearty patronage of Government."

6. Minto, Moira and Rammohan Roy- Lord Minto's Minute written in 1811 regretted the neglect of literature and science in India and suggested improvement in existing colleges in addition to the establishment of new ones. Two years later when the charter of the East India Company was being again renewed, a clause was inserted stipulating that "a sum of not less than one lakh of rupees in each year shall be set apart and applied to the revival and improvement of IV literature and for the introduction and promotion of knowledge of the sciences among the inhabitants of the British territories in India". shortly afterwards Lord Moira observed in a Minute that public money would be ill-spent on the existing colleges but that the tuition which was then available had to be improved and diffused in places so long deprived of this benefit. This suggestion was acted upon by a group of men led by one of the greatest Indians of the century, Raja Rammohan Roy, who formed an association for founding an institution where the Hindus would receive instruction in European Languages and Science. The Hindu College was founded in 1817 and in 1818 the Bishop of Calcutta opened an institution which was to serve the double purpose of training young Christians as preachers and of imparting a knowledge of the English language to Mohamedans and Hindus. The Proposal to establish a Sanskrit College at Calcutta elicited a vigorous protest from Rammohan 'Roy who did not want his young contemporaries to acquire "the vain and empty subtleties" of speculative men." These 'protests proved unavailing, but in a few years the Court of Directors wrote with approval of the efforts to raise up a class of persons qualified for high employment in the civil administration of India ; "As the, means of bringing about this most desirable object we rely chiefly on their becoming through a familiarity with European literature and science, imbued with the ideas and feelings of civilised Europe on the general cultivation of their understanding, and specifically on their instruction in the principles of morals and general jurisprudence"

7. Bombay : Mountstuart Elphinstone-Shortly after this in 1830 and in a the Court of Directors communicated their policy to the Governments of Madras and Bombay who had not so far done very much for the propagation of Western_ Education, in spite of Mountstuart Elphin- stone's famous Minute of 1923 urging the establishment of schools for teaching English and the European Sciences. Elphinstone expressed the same views before the Lord's Committee in 1830 and in a communication to the Commissioners for Indian Affairs he was more explicit:- "I conceive it is more important to impart a high degree of education to the upper classes than to diffuse a much lower sort of it among the common people. The most important branch of education is that designed to prepare natives for Public employment. if English could be at all diffused among persons who had the least time for reflection, the progress of knowledge, by means of it, would be accelerated in a ten-fold ratio since every man who made himself acquainted with a science through English would be able to communicate it in his own language to his countrymen". As a first stop towards this he proposed the establishment, of a school at Bombay Where English might be taught "classically and where instruction might also be given in that language on history, geography and science. A school on these lines had

already been established by him at Bombay and in 1833 a similar school was established at Poona, leading next year to the founding at Bombay of the Elphinstone College which was to be instrumental in training "a class of persons qualified by their intelligence and morality for high employment in the civil administration of India."

8. East and West: Macaulay- While these developments were taking place in Bombay and Bengal the demand for instruction in English grew more and more insistent. English books were sold by the thousand and there was practically no demand for Sanskrit or Arabic books. In order to satisfy the popular demand English classes had been attached to the Madrasah and the Sanskrit College at Calcutta as also to the Agra College (established in 1818) but those failed in their object as the students had no time to go through the additional course while doing their heavy oriental work. Hence started the controversy between those who wanted to impart instruction through Arabic and Sanskrit and those who wanted to use English. This matter was placed before the Government in 1835 by the Committee of Public Instruction and elicited a Minute from Macaulay who was then the Law Member. He discussed the Act of 1813 which provided a sum of money for the revival and promotion of literature and for the introduction of a knowledge of sciences among the inhabitants of British territories. He disputed the view that by literature Parliament could have meant only Arabic and Sanskrit literature as he had not yet found an orientalist "who could deny that a single shelf of a good European Library was worth the whole native literature of India and Arabia". He argued that English was the language spoken by the ruling class and it was likely to become the language of commerce "throughout the seas of the East." He therefore came to the conclusion that the Government was free to employ its funds in teaching what was better worth knowing than Sanskrit or Arabic, what the Indian desired to learn rather than these old languages. Further "neither as the languages of law nor as the languages of religion have Sanskrit or Arabic any peculiar claim to our encouragement " and "it is possible to make natives of the country thoroughly good English scholars" to which end efforts should be directed. The ideas expressed in this Minute were not the result of Macaulay's stay in India, as before coming out to this country he had already said in the House of Commons:-"Are we to keep the people of India ignorant in order that we may keep them submissive? Or do we think that we can give knowledge without awakening ambition? Or do we mean to awaken ambition and to provide it with no legitimate vent?..... It may be that the public mind of India may expand under our system until it has outgrown that system, that by good government we may educate our subjects into a capacity for better government that having become instructed in European knowledge, they may, in some future age, demand European institutions. Whether such a day will ever come I know not. Whenever it comes it will be the proudest day in English History..... The scepter may pass away from us. Victory may be inconsistent to our arms. But there are triumphs which are followed by no reverse. There is an empire exempt from all natural causes of decay. These triumphs are the pacific triumphs of reason over barbarism: that empire is the imperishable empire of our arts and our morals, our literature and our laws".

9. Resolution of Bentinck and his Council- Macaulay's Minute was approved by the Governor-General, Lord William Bentinck and his Council. On 7th March, 1835, they passed a resolution in which they emphasised:-

(1) that the "great object of the British Government ought to be the promotion of European literature and science amongst the natives of India and that all funds appropriated for the purposes of education would be best employed on English education alone;

(2) that while the colleges of oriental learning were not to be abolished, the practice of supporting their students during their period of education was to be discontinued ;

(3) that Government funds were not to be spent on the printing of oriental works ; and

(4) that all the funds at the disposal of the Government would henceforth be spent in imparting to the Indians a knowledge of English literature and science."

This resolution of the Government was heartily welcomed by the leading Hindus but the feelings of the Mahomedans towards English education were not quite friendly. As the Sanskrit scholar H.H. Wilson, put it : "Upon the proposal to appropriate all the funds to English education there was a petition from the Mahomedans of Calcutta, signed by about 8,000 people, including all the most respectable Maulvis and native gentlemen of the city. After objecting to it upon general principles they said that the evident object of the Government was the conversion of the natives ; and they encouraged English exclusively and discouraged Mahomedan and Hindu studies, because they wanted to induce the people to become Christian." In order to allay these suspicions Lord William Bentinck enunciated a policy of strict religious neutrality : "In all schools and colleges..... interference and injudicious tampering with the religious belief of the students mingling direct or indirect teaching of Christianity with the, system of instruction ought to be positively forbidden." Among the first fruits of the new policy were the establishment of a college at Hooghly in 1836, the proposal to establish a college at Dacca (and one eventually at Patna) in 1840, the transfer to the Calcutta Hindu College to the Government and its development into the Presidency College.

10. The Work of Christian Missions- The policy of religious neutrality was not accepted by the missionaries who had by this time founded a number of institutions, among the earliest of which were the products of the work of Danish Missionaries who arrived at Tranquebar in 1706. In 1716 they opened an institution for the training of teachers and next year two charity schools at Madras, one for the Portuguese and the other for the Tamil children, teaching them English and the principles of Christianity. Of the second batch of these missionaries the most famous was Schwartz who persuaded local Rajahs to open English schools at Tanjore, Ramnad and Sivaganga. In Bengal the pioneers were Carey, Marshman and Ward who started work at the Danish settlement at Serampore in 1793. Twenty years later we find the Baptists working at Dinajpore and Jessore, the London Missionary Society at Dutch Chinsura and Vizagapatam, the American Board in Bombay and some workers at Bellary. By 1820 the activities of Missionary Societies had expanded considerably but their primary aim was not educational. Even when they took up educational work they paid more attention in the beginning to the study of modern Indian languages than to English. When they started English Schools (one of the pioneers being Dr. Alexander Duff in 1830) it was mainly to

have an opportunity of preaching the Gospel to the upper classes of society. By 1840 these mission workers had almost universally come to accept the view that English education would lead to the spread of Christianity ; and so institutions for the teaching of English and Western knowledge were started in all parts of the country. In Bombay Dr. John Wilson founded the college which was later named after him. At Madras Anderson and Braidwood started a school in 1837 which, under the guidance of Dr. William Miller became the Madras Christian College. In 1841 Robert Noble founded a college at Masulipatam and in 1844 Stephen Hislop opened a College at Nagpur, while the Church Missionary Society founded the St. John's College at Agra in 1853. Indian pupils came to these institutions for the acquisition of modern knowledge and were willing to put up with compulsory religious instruction though they were not much attracted by the teaching of Christianity. The Mission workers realised this but were willing to carry on their educational work with the same fervor as before, provided they are allowed to continue their Bible classes. Dr. Duff was very explicit as regards the aims of these institutions: "One great object was to convey, as largely as possible a knowledge of our ordinary improved literature and science to the young persons ; but another, and a more vital object was.... to convey a thorough knowledge of Christianity with its evidences and doctrines. Our purpose was therefore to combine in closed inseparable and harmonious union, what has been called a useful secular with a decidedly religious education."

The Serampore college established in 1818 obtained a charter from the Danish King in 1827 raising to the statute of a university and giving it the power to conferring degrees.

11. The Medium of Instruction and Proposals for Universities:- While there was this divergence of opinion about the place of religion in education in 1844 a Government Resolution enjoined that for, public employment in every case preference would be given to those who had been educated in Western science and were familiar with the English language. English had been definitely established as the medium of instruction by more than one communicate of the Government typical among which were the observations of Lord Auckland "I would make it my principal aim to communicate through the means of the English language a complete education in European literature, philosophy and science to the greatest number of students who may be ready to accept it." In Bombay the policy regarding the medium of instruction changed between 1821 and 1843. In the former year the Bombay Education. Society had observed : "In imparting to the natives useful knowledge to any extent and with the hope of any good and permanent effect it is evident that the language of the country must be the chief and proper vehicle. The English language is almost confined to the Island of Bombay and is principally to be found among these who are anxious to acquire it for the furtherance of mercantile pursuits or for facilitating their intercourse or employment with the Europeans..... It is impossible

to look with any hope of success to imparting knowledge generally and usefully in a language which must remain to the greater portion a foreign one". In 1843 the policy was radically altered and it was generally recognised that education must be imparted through the English language. In Madras the controversy did not arise because the first efforts of the Presidency were directed to the extension of primary education and it was not till 1841 that a High School was opened and, entitled "the University", a Collegiate Department being recognised in this institution about 10 years later. While Madras was content to use the title of a University in this fashion, the Bengal Council of Education proposed in 1845 the establishment of a University of Calcutta with a view to conferring on the products of the rapidly increasing number of new institutions "some mark of distinction by which they might be recognised as persons of liberal education". This proposal was however not accepted by the Court of Directors.

12. Medical Education- The genesis of medical education is to, be traced to the appointment of a committee in 1833 to report on the study of medical education imparted in several institutions in Calcutta. A question had been raised by the Committee of Public Instruction as to, "whether it would be expedient to confine the medical instruction to English lectures and to adopt for class books small English treatises, discarding Sanskrit medical books altogether". The Committee recommended the establishment of a new institution, in which "the various branches of medical sciences cultivated in Europe should be taught and as near as possible on the most approved European system". This ultimately led to the foundation of the Calcutta Medical College where in one of the early courses of lectures dissection had to be introduced. Here is a graphic account of the first attempt to dissect a dead body : "It had needed some time, some exercise of the persuasive art before Madhusudan could bend up his mind to the attempt ; but having once taken the resolution, he never flinched or swerved from it. At the appointed hour, scalpel in hand, he followed Dr. Goodeve into the godown where the body lay ready. The other students, deeply interested in what was going forward but strangely agitated with mingled feelings of curiosity and alarm, crowded after them, but dared not enter the building where this fearful deed was to be perpetrated; they clustered round the door, they peeped through the jilmils, resolved at least to have ocular proof of its accomplishment ; and when Madhusudan's knife, held with a strong and steady hand, made a long and deep incision in the breast, the lookers-on drew a long gasping breath like men relieved from weight of some intolerable suspense". The first hospital was opened in 1833 and three years later a hospital for women was added. In 1844 four students of the College in charge of Dr. Goodeve went to England to complete their medical education. The foundation stone of the present college hospital was laid in 1848 and it was opened in 1851.

In Madras the establishment of a medical school was sanctioned in 1835 and 7 years later the Board of Governors submitted a scheme for starting a Collegiate class in the Faculty of Medicine to be attached to the Institution. This scheme was disapproved by the Court of Directors, but in 1852 we note the Governor-in-Council observing that Medical Classes have been established at the Madras Medical College with distinguished success. Three years later this institution was recognised by the Royal College of Surgeons of London as one of the Colonial Schools of Medicine and Surgery. In Bombay on the

initiative of the then Governor, Sir Robert Grant, a scheme was drawn up for the establishment of a Medical Institution and the College was formally opened in 1845. Professorships were added in the following years and the College was recognised by the Royal College of Surgeons in 1854.

13. Education in Engineering- Education in Engineering seems to have begun with an Engineering Institution in Bombay as early as 1824 but we know very little of its work. A class for training Engineers was opened in the Elphinstone Institution in 1844 but for want of suitable candidates for admission it was broken up after three years. In Bengal a Chair of Engineering was sanctioned for the Hindu College in 1844 but it remained vacant as no Professor was available. In 1848 the Earl of Dalhousie suggested the establishment of an Engineering College in each of the three Presidencies. But on account of numerous controversies no college came into existence till 1856, when a new institution was opened at Writers' Buildings in Calcutta. In Madras an institution was started in 1858 and in Bombay a school for the improvement of Arts and Manufactures was opened in 1856. In the North Western Provinces (the present United Provinces) the establishment of a college was a direct outcome of irrigation and other engineering schemes undertaken by the Government. In 1847 it was decided to construct the Ganges Canal and large workshops were erected at Roorkee. The Lieutenant Governor (Mr. Thomason) proposed the establishment of a college to supply a staff of engineers. The scheme was sanctioned and the college named after him was opened the same year. The

¹ Quoted from a speech of Mr. J. E. D. Bethune delivered while unveiling Madhusudan's portrait.

college underwent a rapid expansion within the next few years and in spite of the disturbances of 1857 we find it a well- developed institution by 1860.

14. Legal Education- The early teaching of law was carried on at the Calcutta Madrasah and the Banaras Sanskrit College where Muslim and Hindu Laws were respectively studied. Macaulay referred to the teaching of law in his famous Minute, and a few years later, a Committee was asked to report how studies connected with Jurisprudence might be introduced into the superior colleges. In 1842 a Professorship was created in the Hindu College but after a first course of lectures by a distinguished Advocate-General no appointment was made till 1847, when the post was again sanctioned. A few years later the Council of Education decided that Law should have a place in the annual Examination for Senior Scholarships and the Law Class was organised on a permanent footing in 1855. The same year a Professorship of Law was sanctioned at the Madras Institution and a Professorship of Jurisprudence created at the Elphinstone College in Bombay.

15. Wood's Despatch of 1854- This brings us to the famous despatch of Sir Charles Wood to the Court of Directors of 1854 which has been described as "The Magna Charta of English Education in India". It set forth a scheme of education far wider and more comprehensive than any one which had been suggested so far. It enunciated the aim of education as the diffusion of the Arts, Science, Philosophy and Literature of Europe. It laid down that the study of Indian Languages was to be encouraged and that the English Language should be taught wherever there was a demand for it, and that both the English Language and the Indian Languages were to be regarded as the media for the diffusion of European knowledge. 'the point of the Despatch in which we are most interested is the decision to establish universities. The Court of Directors felt that the time had arrived for the establishment of universities in India which might encourage a regular and liberal course of education by conferring academic degrees as evidence of attainment in the different branches of Arts and Sciences. They agreed with the proposal which had been made a few years earlier to establish universities on the model of the London University and which were to consist of a Chancellor, Vice- Chancellor and a Senate. The Senate was to have the management of University funds and to frame regulations under which periodical examinations would be held. in the different branches of Arts and Sciences by examiners selected from their body or nominated by them. The function of the universities was described as that of conferring degrees upon such persons as would come from any of the affiliated institutions and after having pursued a regular course of study for a given time would have, passed some required examinations. The detailed regulations for the examinations were to be framed with due regard to the class of the affiliated institutions and they were to exclude all subjects connected with religious beliefs. Professorships were to be instituted in various branches of learning among which would be Law, Civil Engineering and Classical Oriental Languages. Calcutta and Bombay were to have the first universities which would utilize the services of the existing Council of Education at Calcutta and the Board of Education at Bombay. A University might also be created at Madras or in any other part of India where a sufficient number of institutions existed from which properly qualified candidates for degrees could be supplied. The existing institutions of Higher Education were enumerated in the Despatch and it was laid down that the affiliated institutions would be periodically visited by Government Inspectors. This Section of the Despatch concluded with a hope that a spirit of honourable rivalry would be promoted among these institutions and the division of university degrees and distinctions into different branches would direct the efforts of highly educated men to the studies which were necessary to success in the various active professions of life.

16. Establishment of Universities at Calcutta, Bombay and Madras- The universities were not immediately established; Minutes and a Committee intervened. The report of the Committee suggested various examination leading to diplomas and degrees, the two varieties of the latter being the ordinary and honours degrees. In addition to courses in the Arts the Committee suggested those in Law, Medicine and Engineering, with provisions for ordinary and honours degrees in these as well. Towards the end of 1856 the Government of India approved of the general plan of the Committee ; drafts of Bills for the establishment of three universities were soon prepared and the first of these passed early in 1857 received the Governor-General's assent on 24th January. The establishment

of this first university at Calcutta was followed by those at Bombay and Madras on the same lines and it is interesting to compare the structures of these three. While the Governor-General was the Chancellor of the Calcutta University, the Governors of Bombay and Madras were the heads of the other two. The Calcutta Senate had 38 members of whom six were Indians while Bombay had five Indians in a Senate of 29, and Madras three out of 40. Each of the three universities had at first the four Faculties of Arts, Law, Medicine and Engineering to which a faculty of Science was added later. The relationship between the universities and their affiliated colleges was not clearly defined but the territorial jurisdiction of the Universities of Bombay and Madras was limited to the respective Presidencies, while that of Calcutta was not similarly circumscribed. The regulations for the courses and diplomas were not exactly the same for the three Universities but followed similar lines. The first University Entrance Examination was held at Calcutta in 1857 ; 244 candidates appeared of whom 162 were successful. 13 candidates appeared for the first degree examination of 1858 and only two were successful, one of whom was Bankim Chandra Chatterjee, the famous novelist and author of the national song Vande Mataram.

II- University Education from 1857 to the present day.

17. Development of Universities from 1857-1882- The history of the first 25 years of university work is mainly one of growth the number of colleges and students but no new university was established till 1882. At the first Entrance Examination of the three Universities 219 candidates were successful-162 at Calcutta, 21 at Bombay and 36 at Madras. In 1882, 7,429 candidates appeared of whom 2,778 were successful. The growth of candidates also gives us an idea of the increase in other directions. In 1857 the total number of colleges in India was 27 while in 1882 there were about 75 colleges. During the first 14 years 2,666 candidates passed the First Arts (Intermediate) Examination, 850 the B.A. Examination and 151 the M.A. During the next 11 years the corresponding numbers were 5,969, 2,434 and 385.

One point about the development of education during 1871-83 was emphasized by the Calcutta University Commission : during these years the number of High, Schools in Bengal, Bihar and Orissa rose from 133 to 209 but there was a decrease in the number of Government and Aided Schools. The organisers of Bengal High Schools were discovering that these schools could be run on a self-supporting basis without Government grants, and they need not therefore submit to the conditions which the Department imposed. The flood of candidates which made the rise of these schools possible all aimed at one single goal : success the Entrance Examination of the University; and their requirements of this examination were already the only regulating or controlling influence for a large part of the schools of Bengal."

Thus the Department of Education was gradually losing its influence on Secondary Education and its place was being taken by private agencies and the University.

Another point to be noted for this period is that though the Despatch of 1854 had suggested a gradual withdrawal of Government from direct management of colleges, this

was found impracticable; on the contrary, new Government colleges had to be established. The Calcutta Presidency College had been intended to form the nucleus of the Calcutta University; and it is worth noting that, when the University was founded two years later, the reason put forward for the failure to establish a series of University Professorships such as the Despatch had recommended was that the ample financial aid to the Presidency College met the need.

The universities thus remained purely affiliating bodies and no attempt was made to develop them into a "federal" type or with any provision for inter-collegiate instruction. London University had supplied the model and it is ironical that soon after the establishment of the Indian Universities, London itself gave up "affiliation" and substituted for it constituent Colleges and a system of open examinations without regard to the candidates' place of education. As affiliating bodies the Universities made, it their sole function to conduct examinations and to regulate the admission of candidates to these through a supervision of the place of instruction. Elaborate regulations were framed and the freedom of the teacher consequently curtailed.

18. Proposals for New Universities- The increase in numbers of candidates for the examinations and the vast extent of the area under the jurisdiction of the Universities led to proposals for the establishment of new universities. In 1865 a number of influential people supported by the Lieutenant-Governor of the Punjab mooted a, proposal for the establishment of an Oriental University for that Province and in 1867 the British Indian Association of the North- Western Provinces (United Provinces) petitioned the Viceroy, pointing out some defects of the educational system and recommending the establishment of a university in the Province in which the, study of the eastern classics and the modern languages would be encouraged along with western literature and science. The Government of India was unable to accede to either of these demands, but agreed to attend to the points about the reform of education and also to found a University College in the Punjab. The aim of this institution was to encourage that aspect of education which was, being neglected, viz., the study of Sanskrit and Arabic, and the diffusion of knowledge through the medium of an Indian language. This college went, on expanding its activities for ten years before a fresh demand was made for a University in the Punjab, but this time the Government of India favored the idea. So an Act of 1882 formally constituted the University with the Lieutenant-Governor of the Punjab as the Chancellor, and with a constitution more or less similar to those of the existing universities. The Senate was to be the supreme body of the University and was to be representative in character. The University was to be an affiliating one, but one section of the Act authorised the University to take up teaching work through the appointment of University Professors and Lecturers.

19. The Education Commission of 1882- In 1882 the Government of India appointed a Commission "to enquire into the manner in which effect had been given to the principles of the Despatch of 1854 and to suggest such measures as it may think desirable in order to the further carrying out of the policy therein laid down". Though the working of the Indian Universities was not specifically included within the scope of the Commission it collected a good deal of valuable information about the colleges, especially with regard to

attendance, fees, discipline and later career of students which will be found extremely useful. There were several points in the recommendations which interest us :-

- (1) While advocating the gradual withdrawal of the State from the direct support and management of institutions of higher education it felt that this withdrawal could only be by slow and cautious steps, handing over a college or secondary school to a body of Indians provided there was a reasonable prospect that the cause of education would not suffer through the transfer ;
- (2) Provision is to be made for ordinary and special grants to Colleges ;
- (3) There should be alternative courses in the larger colleges
- (4) Certain general principles have to be followed as regards college fees and exemption from them ;
- (5) New regulations about scholarships have to be framed
- (6) An attempt should be made to prepare a moral text- book based upon the fundamental principles of natural religion such as may be taught in all Government and non Government Colleges ; and
- (7) "The Principal or one of the Professors, in each Government and Aided College, deliver to each of the College classes, in every Session, a series of lectures on the duties of a man and a citizen". (Mr. Telang in a dissenting note wrote against these two recommendations).

The Government of India, while accepting the main recommendations of the Commission., directed the preparation of an annual report reviewing the progress of education the country ; and the first of these published in 1886 defined and classified colleges and published some valuable statistics regarding enrolment, examination results and expenditure of colleges from 1881-85, comparing expenses on Collegiate Education derived from public and private funds. The Review for the next five years has interesting figures regarding collegiate education and the finances of universities from which one gathers that while the Universities of Calcutta and Madras were entirely independent of Government aid, the Bombay University received a small grant and the Punjab University a, larger one.

It was during these five years that the fifth Indian University was established ; an Act of 1887 brought the Allahabad University into being. The Muir College had been opened the preceding year and the demand for a university made nineteen years earlier was renewed. The quinquennial review of 1897-1902 writes : "The Local Government carefully considered the exact form the University should take, and in special whether in addition to prescribing courses and conducting examinations it should maintain. a staff of professors and even of private teachers, after the pattern of the universities of Germany. While recognising the great value of a university of this type, the Lieutenant-Governor

considered that, at all events at first, the University should confine its operations to the direction of the methods and aims of instruction; adapting them to the needs, circumstances, provisions and predilections of the country The Act imposes no limitations on the scope and activity of the University, but hitherto Allahabad has conformed to the practice of the three original universities, and confined itself to conferring degrees on candidates who pass its examination, after following a prescribed course of study in an institution affiliated to it."

20. Expansion of Higher Education from 1882-1902- The recommendations of the Education Commission of 1882 were followed by a rapid expansion of higher education during the next two decades. The number of High Schools increased rapidly and the courses at these institutions were mostly of the same type leading to the university Entrance examination. The majority of those who passed this examination were attracted to the colleges because University degrees were the main passport to lucrative Government employment and there were few other openings for educated young men. The recommendations also led to the growth of a large number of new institutions fostered by private enterprise, where education was less expensive and, in some cases, less efficient. University education in India, However, owes a great debt to the private societies like the Deccan Education Society of Poona, the Arya Samaj in the Punjab and later to the National Council of Education in Bengal. Nor can the contributions of private individuals like Ishwar Chandra Vidyasagar and Pachayappa Mudaliar be forgotten. In 1882 the total number of colleges was less than 75 (68 of them were regularly affiliated); during the next decade 61 new colleges were affiliated while the following one saw the establishment of 50. The total number of affiliated colleges in 1901-02 was therefore 179, of which 126 were in British India and the rest in the States, Burma and Ceylon. The enrolment in colleges too showed a proportionate increase and we may take the total number of students in Arts Colleges to illustrate the point. In 1881-82 there were 5,399 students in these colleges; on 31 st March 1887 the number was 8,060, the figures for the following years being 9,656, 10,618, 11,546 and 12,424. The numbers of successful candidates at the B.A. examination were 287 in 1882, 573 in 1885, 898 in 1892.

21. The Universities Commission of 1902- This expansion of higher education and the rise of colleges which depended mainly or wholly on fees led to problems which had to be tackled by the Government, and on 27th January, 1902 a Commission was appointed "to enquire into the condition and prospects of the universities established in British India ; to consider and report upon any proposals which have been or may be made for improving their constitution and working, and to recommend such measures as may tend to elevate the standard of university teaching, and to promote the advancement of learning."

The main recommendations of the Commission are as follows:-

1. The legal powers of the older universities should be enlarged so that all the universities may be recognised as Teaching Bodies but the local limits of each university should be more accurately defined and steps taken to remove from the Calcutta list the affiliated colleges in the Central Provinces, United Provinces, etc.

2. The Senate, the Syndicate and the Faculties have to be reorganised and made more representative than before.

3. The affiliation rules have to be framed in such a way as to secure-

(a) that no institution shall be admitted to affiliation unless on the fullest information ;

(b) that no institution once admitted be allowed to fall below the standards of efficiency required for affiliation and the Syndicate should satisfy itself from time to time on this point.

4. There should be a properly constituted Governing Body for each College.

5. Attention should be paid to the residence and discipline of students.

6. The courses and methods of examination in all subjects have to be changed according to the suggestions made in the Report.

22. The Universities Act of 1904- The Universities Act of 1904 embodied the main recommendations of the Commission and reconstituted the Governing Bodies of the universities. The Senate of the university was to have not less than 50 and not more than 100 members. The number of elected fellows was fixed at 20 for the three older universities and 15 for the other two. Statutory recognition was given to the, Syndicates with adequate representation of university teachers on them. Conditions for affiliation to the university were clearly laid down and were intended to be rigorously observed. The university was given the power of making provision. for the instruction of students through the appointment of University Professors and Lecturers and to do all acts which tend to the promotion. of study and research. The, Government was vested with certain powers regarding the regulations to be framed by the Senates and the Governor-General in Council was empowered to define the territorial limits of the universities.

Indian opinion was very critical of this Act as the number of seats in the Senate thrown open to elections. was very small and the restriction of numbers was supposed to create a majority for Euro- peans. The provisions for the exercise of teaching functions by the University were not considered very important as such provisions in the older Acts had not so far been utilized, while the new regulations for affiliation of colleges were regarded as means to hamper Indian private effort in the field of education. The immediate result of the Act was to reduce the number of affiliated colleges which in 1902 had stood at 192 for British India and the Indian States. Five years later we find that in spite of the affiliation of some new colleges the total was 174 and in 1912 the number was not more than 170, though 10 years later the number grew to 207. While there was no substantial increase in the number of affiliated colleges between 1902 and 1922 the total number of students educated. in these colleges had substantially increased. In the former year the number was in the neighbourhood of 20,000, while in 1922 it was over 50,000. Thus the restriction on the recognition of new colleges only increased the

enrolment of individual colleges as there was no diminution in the eagerness for higher education in the absence of vocational courses.

23. A New Political and Economic Consciousness- This keenness for university education can be best understood in the context of the social and political background of the early years of this century. Macaulay's prophecy that instruction in Western knowledge would lead to demand for western political institutions was justified by the turn of events after half a century of English education. The foundation of the Indian National Congress in the closing years of the 19th century marks the beginning of the new political consciousness. The agitation over the partition of Bengal showed the strength of the new born Indian Nationalism and its effects were felt in a reaction against the education which was responsible for the new ideas. It manifested itself through the foundation of institutions independent of the universities. Thus the Gurukul Kangri of Hardwar and the institutions conducted by the National Council of Education' Bengal remained independent of the system of education controlled by the State. The activities of the latter extended to studies in Arts and Science as also in Technology, but while the college of Technology flourished and has developed into an excellent institution, the Arts College languished after the first flush of enthusiasm. The desire to advance the economic prosperity of the nation led to greater emphasis on scientific and technical education and private bodies attempted to undertake this training for a limited number of students either through institutions established in this country or through scholarships for sending students to foreign countries. Private efforts however could not achieve very much, and politicians gifted with foresight felt the necessity of the establishment of new colleges and universities with an emphasis on science and technology.

24. Government Resolution on Educational Policy in 1913 - A Government Resolution on educational policy in 1913 clarified the policy in regard to Higher Education. It indicated that as India would not be able to dispense altogether with the affiliating universities for a long time, it was necessary to restrict the area over which such universities would have control and secondly to create new teaching and residential universities within each of the provinces. Universities of the latter type were to be established at Dacca, Aligarh and Banaras while other new universities would be established at Rangoon, Patna and Nagpur. It might also be possible to sanction the conversion into local teaching universities of those colleges which had attained the requisite standards of efficiency. The War which broke out the next year delayed the developments planned in this Resolution but the two Universities at Banaras and Patna were founded in 1916 and 1917 respectively. The former intended to develop Hindu culture and the study of Applied Sciences, owed its existence to the untiring efforts of Pandit Madan Mohan Malavya and the latter was meant to cater to the needs of the new Province of Bihar and Orissa.

25. The Calcutta University Commission- In 1916 the Calcutta University wanted to break fresh ground through the creation of its Post-Graduate Departments. There was, practically no provision so far for direct teaching by the University and now under the dominating leadership of Sir Asutosh Mukerji the University decided to concentrate Post-Graduate teaching directly in the University and appointed a number of Lecturers and

Professors for the purpose. While Sir Asutosh Mukerji was engaged in this work the Government of India decided to appoint a Commission for holding an enquiry of a very comprehensive and searching character into the problems of the Calcutta University. The terms of reference included all aspects of Collegiate and University Education. Problems of Secondary Education were not excluded from its purview and it was expected to study the Organisation and working of other Indian Universities to help it to formulate the policy of the Calcutta University. The Commission submitted a voluminous report in 1919 dealing with practically every problem of Secondary and University Education. The main recommendations were as follows

1. The Intermediate Classes of the University were to be transferred to Secondary Institutions and the stage of admission to the University should be that of the present Intermediate Examination;
2. Secondary and Intermediate Education was to be controlled by a Board of Secondary Education and not by the University ;
3. The Government of India should cease to have any special relationship to the University of Calcutta and the Government of Bengal should take its place;
4. The duration of the Degree Course should be three years after the Intermediate Stage, the provisions being applied immediately in regard to Honours Courses and soon after to Pass Courses;
5. The teaching resources of the city of Calcutta were to be organised to create a real teaching University and the project of a university at Dacca was to be carried into effect at the earliest possible moment. The mofussil colleges were to be organised in such a way as would encourage the gradual rise of new university centres by the concentration of higher teaching at a few points;
6. Special attention was to be paid to women's education and a Board constituted for the purpose;
7. The Government service system being unsuitable for universities, a new organisation of the teaching service in universities was necessary;
8. Problems of vocational and professional training including that of teachers, lawyers, medical men, engineers, architects and agriculturists were to be seriously taken in hand by the University and numerous reforms were suggested;
9. The medium of instruction for most subjects up to High School stage was to be the "Vernacular" but for late stages it should be English (except in dealing with Classical and Modern English Language);
10. The method of examinations needed radical improvement.

26. The Rise of new Universities.- The Report of this Commission, though primarily intended for the Calcutta University, did not produce the desired effect owing to the controversies between the University and the Government regarding financial support which was absolutely essential for implementing the recommendations of the University Commission. Two new Teaching Universities had already been started in the Indian States, one at Mysore and the other at Hyderabad. The special features of the Mysore University are that almost entirely a State organisation and that its teaching activities are confined not to one centre but to two, Mysore and Bangalore. The Osmania University (Hyderabad) was founded through the efforts of Sir Akbar Hydari; it is also under the control of the State and its claim to uniqueness was in its adoption of Urdu, the Official language of the State, as the medium of instruction for all university classes. The M. A. O. College, Aligarh, founded in 1875 by Sir Syed Ahmed, was developed into the Muslim University to meet the special needs of the Muslim community as the Hindu University developed out of the Central Hindu College founded by Mrs. Annie Besant and was intended to cater to those of the Hindus. The United Provinces accepted the recommendations of the Calcutta University Commission and constituted in 1921 a Board of High School and Intermediate Education to organise and control secondary education in the Province. The Canning College and King George's Medical College, Lucknow, were merged in the Lucknow University, and the Muir Central College, the Ewing Christian College and the Kayastha Pathshala College, Allahabad, into the Allahabad University. In Bengal the main effect of the Report of the Commission was the establishment of the teaching university at Dacca while Rangoon became a University in 1920. Other new universities were established at Delhi in 1922. Nagpur (for the Central Provinces) in 1923, Andhra (for the northern part of Madras Province) in 1926, Agra in 1927 and Annamalai at Chidambaram in the southern part of Madras Presidency in 1929, the last one owing its existence to the generosity of the late Raja Sir Annamalai Chettiar. There was a gap of a few years before the third State University was established in Travancore, followed by Utkal (for the Province of Orissa) in 1943 Rajputana in 1947 and Saugor (for the Hindi-speaking part of Central Provinces) in 1947, the foundation of the last one being helped by a donation from Sir Hari Singh Gaur. Assam had University established at Gauhati in 1947, Poona (for a part of Bombay Presidency), Roorkee (incorporating Thomason Engineering College) and Kashmir Universities came into existence in 1948 and Baroda in April 1949.

Of these new universities Banaras is a teaching university directly under the Government of India and its territorial jurisdiction is confined by the Act to the recognition and constituting of colleges at Banaras. In the number of and variety of its Departments of teaching Banaras outstrips all other teaching universities in India while the lay-out of the buildings on the campus with its teaching and residential blocks is more extensive than that at any other university. Established with the help of generous donations from private individuals and ruling, princes it is now mainly the responsibility of the Government of India. Exactly parallel in its activities is the Aligarh University which however does not have as many faculties or buildings as Banaras, but which has been more of a model as regards corporate and residential life. Banaras and Aligarh retain their Intermediate classes which were not attached to the newer Universities of Dacca and Lucknow or the re-constituted University of Allahabad. Allahabad maintained the two-fold activity of

teaching and affiliation for five years till its external side was removed to Agra. Allahabad and Lucknow attempted to follow the recommendations of the Calcutta University Commission. Annamalai University, though on a smaller scale, followed the same pattern and it has more adequate buildings than most other residential universities. Agra, Utkal, Rajputana and Kashmir Universities are still purely affiliating universities while Patna and Nagpur have started teaching work in a few departments only within the last few years. Delhi has attempted to combine the teaching and federative activities and the former has expanded rapidly within the last ten years. Roorkee is a University with just one Faculty, that of Engineering, while the other universities combine teaching with affiliating work as the older universities are also doing now. The Bombay University Act was amended in 1928 and the constitution made more, democratic than before. Its School of Economics and Sociology was established in 1919 and it has an extensive department of Chemical Technology as well. The Madras University Act of 1923 liberalised its constitution and enabled the University to assume a large amount of teaching activity on its own. Economics, Indian History, Philosophy, Political Science, Mathematics, Zoology, Biochemistry, Geography and Botany are some of the subjects in which the University supplements College teaching and offers facilities for research. The University teachers are not over-burdened with routine duties in teaching, and are encouraged to undertake research. The teaching activities of the Calcutta University already referred to have been considerably expanded, in recent years particularly in the Sciences, both pure and applied, and it now has about thirty departments. In some of these subjects the University offers courses for under-graduate students, but the teaching work of the University has been almost entirely confined to post-graduate and research students.

27. The Inter-University Board.- With the establishment of the new universities the Government of India felt the necessity of some agency to co-ordinate their work. A conference of Indian universities held in 1924 decided to establish an Inter-University Board, the functions of which were to be :-(a) to act as an Inter-University organisation and bureau of information ; (b) to facilitate the exchange' of professors ; (c) to serve as a authorised channel of communication and facilitate the co-ordination of university work ; (d) to assist Indian Universities to get recognition for their degrees and diplomas in other countries ; (e) to appoint a common representative (or representatives) of India at Imperial or International Conferences on Indian education. The Board has acted as an advisory body but its influence has not been as potent as it might have been. The universities have not always been inclined to follow the advice given by the collective voice of the Vice-Chancellors which, in effect, the Board has become. The Board has, however, acted as a forum for discussion of university problems. It has also many publications to its credit among which is the Hand Book of Indian Universities, which is the main source of information regarding Indian universities. Besides holding its own meetings at which various problems of university education are discussed, it has been organising quinquennial Conferences of Indian universities at which some of the most controversial issues of higher education are taken up for careful consideration by the representatives of the universities.

Of the educational investigations within the last 20 years two deserve special mention :-

28. The Auxiliary Committee of the Indian Statutory Commission- (1) The Auxiliary Committee of the Indian Statutory Commission (known as the Simon Commission) which submitted its report in 1929 did not have any detailed recommendations about university education. After speaking with appreciation of the improvement in methods of teaching at the universities, of the original work produced by university men and of their training for corporate life it says : "But the theory that a university exists mainly, if not solely, to pass students through examinations still finds too large acceptance in India; and we wish that there were more signs that the universities regarded the training of broad-minded, tolerant and self-reliant citizens as one of their primary functions. They have been hampered in their work by being over-crowded with students who are not fitted by capacity for university education and of whom many would be far more likely to succeed in other careers".

29. The Report of the Central Advisory Board on Educational Development- (2) The results of the other investigation are embodied in the Report of the Central Advisory Board published in 1943. The chapter on university education plans the future of Indian universities on the basis of compulsory Primary Education and a new Secondary Education. The most valuable part of the Chapter is in its facts and figures with detailed calculations in regard to the future expansion of universities. One of the main recommendations relates to the establishment of a 'University Grants Committee which has already been implemented. The establishment of the Grants Committee by the Central Government has been followed by the setting up of a similar Committee in the United Provinces.

Information about Universities

Name of University	Date of foundation	Present character of University	Number of students in 1946-47
Calcutta	1857	Affiliating and Teaching	45,008
Bombay	1857 (reconstituted 1928)	Affiliating and Teaching	43,090
Madras	1857 (reconstituted 1923)	Federative, Affilating and Teaching	28,888
Allahabad	1887 (reconstituted 1922)	Teaching	35,502 ¹
Banaras	1916	Teaching	5,083
Mysore	1916	Teaching and Affiliating	9,350
Patna	1917	Teaching and Affiliating	15,471
Osmania	1918	Teaching and Affiliating	4,862
Aligarh	1920	Teaching	4,009
Lucknow	1920	Teaching	3,893 ¹
Delhi	1922	Teaching and Federative	4,311
Nagpur	1923	Teaching and Affiliating	5,734
Andhra	1920	Teaching and Affiliating	9,445
Agra	1927	Affiliating	9,936 ¹
Annamalai	1929	Teaching	1,981
Travancore	1937	Teaching and Affiliating	5,715

Utkal	1943	Affiliating	3,662
Saugor	1946	Teaching and Affiliating	14,828
Rajputana	1947	Affiliating.	
East Punjab	1947	Teaching and Affiliating	
Gauhati	1947	Teaching and Affiliating ..	
Poona	1948	Teaching and Affiliating ..	
Roorkee	1948	Teaching.	
Kashmir	1948	Affiliating.	
Baroda	1949	Teaching and Affiliating	

¹Does not include Intermediate Students.

CHAPTER II THE AIMS OF UNIVERSITY EDUCATION

I.-New India

1. The Impact of Political Change. 2. Universities as the Organs of Civilisation. 3. Intellectual Adventure. 4. An Integrated Way of Life. 5. Wisdom and Knowledge. 6. Aims of the Social Order.

II.-Democracy

7. Plan of Treatment. 8. Value of the Individual. 9. Education as Growth. 10. Physical Education. 11. The Triune Character of the Human Mind. 12. Nature, Society and Spirit. 13. Natural Sciences, Social Studies and Humanities, 14. Unity of Mind and Interdependence of Knowledge. 15. Mechanical Learning. 16. Inwardness of Freedom. 17. Education as Initiation into a New Life. 18. Inadequacy of Education as Adjustment to Society. 19. Flexibility of the Educational System.

III.--Justice

20. Social Justice. 21. The Present Needs. 22. Agricultural Education. 23. Technological Education. 24. Rural Development. 25. The Place of the Machine. 26. Defects of Exclusively Scientific and Technical Education. 27. Need for Social Studies and Research. 28. Training for Leadership.
