INTERVENTIONS TO IMPROVE SCHOOLING

An Economist's View

CONDITIONAL CASH TRANSFERS

Conditional cash transfers (CCTs) offer a **regular cash payment to individuals or families conditional on some behaviour, such as a child enrolling in school and attending regularly**, sometimes with a performance requirement

CCTs emerged in the 1990s in Latin Central American countries. One of best known is

- Programa de Educación, Salud y Alimentación (**PROGRESA**) in Mexico launched in 1997 to replace a host of badly targeted subsidies
- The **largest programme is Bolsa Familia in Brazil**, which reached over 12 million families by 2010.

Usually Targeted

Gender /Socio-economic backwardness

PROGRAMA BOLSA FAMÍLIA

Programa Bolsa Família is the largest Conditional Cash Transfer (CCT) program in the world, and Brazil's largest social welfare program.

Objectives

- Combat hunger, and food and nutrition insecurity
- Combat poverty and other forms of familial deprivation
- Provide access to public services: health, education, food security and social assistance

Program Stats

1/4
99.7%
50 Million
13.9 Million

Total population currently enrolled
Brazil's 5570 municípios involved
People currently benefiting
Families currently enrolled

Participants

Bolsa Família targets Brazilian families in two specific income brackets

Extreme Poverty: less than R\$85.00 per person per month.

Poverty: between R\$85.01 and R\$170.00 per person per month.

Participating families can be allocated between R\$32.00 and R\$242.00 per month.

Program Requirements

- ✓ **Mandatory school attendance** 85% of the time for children 6-15 years old; 75% for those 16-17 years old.
- ✓ **Mandatory immunization** for children age 7 and under. Mothers and children must get **regular medical checkups**, allowing children's growth and development to be monitored by national health service professionals.
- ✓ **Mandatory prenatal and postnatal care** for pregnant and new mothers.

Between 2003 and 2013, Bolsa Família helped to reduce extreme poverty from **9.7% to 4.3%**. It has also been credited with **reducing child mortality, increasing school attendance and grade progression, and promoting dignity and autonomy of the poor.**

CCTS IMPROVE SCHOOLING OUTCOMES?

The evidence from 23 studies strongly indicates that CCTs **increase enrolments and attendance, with benefits concentrated amongst the poorest children.**

- In Honduras, there was an overall increase in enrolment and the largest impact was seen in the poorest households.
- Mexico, enrolment increased, **but with a larger impact on older children since primary enrolments** were already 95 per cent.

However, there is no overall impact on learning outcomes.

Positive effects may be partly offset when schooling decisions for one child negatively affects decisions for their other siblings

- In Bogota, siblings who did not benefit from the CCT worked more and attended school less than children in households with no CCT at all

CASH TRANSFERS FOR CHILDREN: EXPERIENCES OF STATES IN INDIA

DISCUSSION PAPER

Table 1: Selected Cash Transfer Schemes for Children from across Indian states

	State	Scheme	Year of Initiation	Objectives	No. of Beneficiaries covered till date (approximate numbers)
1	Assam	Majoni	2009	• To increase institutional births • To reduce child marriage	4,03,700
2	Bihar	Mukhyamantri Balika Cycle Yojana and Mukhyamantri Balak Cycle Yojana	2007-08 2009-10	• To prevent drop out due to distance of schools • To boost enrolment and attendance	78,67,000 for the two schemes combined

Cash for Kind

3	Chhattisgarh	Post-Matric Scholarship scheme for Scheduled Caste (SC)/Scheduled Tribe (ST)/Other Backward Castes (OBC) students	2000 (older scheme continued after formation of Chhattisgarh in 2000)	To provide better opportunities and increase rate of attainment of higher education	11,88,000 since 2012-13 when Direct Benefit Transfer started
4	Jharkhand	Mukhyamantri Laxmi Ladli Yojana	2011	- To reduce female foeticide - To promote education of girl child and reduce drop out - To improve the sex ratio - To reduce child marriage - To encourage family planning among the poor - To increase institutional births - To improve birth registration - To provide financial support during marriage	1,55,000

Cycling to School: Increasing Secondary School Enrollment for Girls in India

Karthik Muralidharan[†]

Nishith Prakash

15 August 2013

Cycling to
School

Increasing Secondary
School Enrollment
for Girls in India

The *Mukhyamantri Cycle Yogina* originally started in 2006 **and provided Rs 2,400 for purchasing bicycles but was only for the girls.** In 2009-2010 the program was expanded to include all the boys in the state of the same age and for the academic year of 2011-2012 the cash was increased to Rs 2,500 per student. In 2012 – 2013, a conditional change was made that only students who maintained a 75% attendance at school were eligible.

http://www.bicyclescreatechange.com/bihar_mukhyamantri_cycle_yogina/

ABSTRACT

Using data from a large representative household survey, we employ a triple difference approach (using boys and the neighboring state of Jharkhand as comparison groups) and find that being **in a cohort that was exposed to the Cycle program increased girls' age-appropriate enrollment in secondary school by 30% and also reduced the gender gap in age-appropriate secondary school enrollment by 40%.**

Cycle program was much more cost effective at increasing girls' enrolment than comparable conditional cash transfer programs in South Asia, suggesting that the coordinated provision of bicycles to girls may have generated externalities beyond the cash value of the program
