MIGRATION

Migration is the **movement of individuals or groups between locations.**

Movement is only considered to be a migration if it fulfills the following criteria

- ▢ **Spatial:** there is a change of usual residence to a different **administrative or political unit.**
- ▢ **Temporal:** the length of time a person has to live somewhere for it to qualify as their permanent or 'usual place of residence' must be defined. (6- 12 months)

key component of demographic change: alters the size, the distribution, and the composition of population (e.g. by sex and age).

WHY PEOPLE MIGRATE?

Push-Pull factors:

- ▢ Economic
- ▢ Education
- ▢ Political
- ▢ Cultural
- ▢ Environmental/Natural

Family

Conflicts and Humanitarian crisis- refugees

PUSH FACTORS

Unemployment. Often, people leave places where they are less likely to get employment (such as rural areas) and go to urban areas where job opportunities are more plentiful. This factor has been the major reasons cities and towns are highly populated. Individuals leave their homes to search for employment in more industrialized areas.

Insecurity. People move away from places that experience terrorism, violence, and high levels of crime. They move in search of peaceful and secure environment.

Scarcity of land. People are forced to migrate in search of more land to cultivate and live in. Individuals in need of undertaking extensive agriculture move to less populated areas.

Political instability. The effects of politics force people to move out of their homes or even countries, in search of a peaceful environment.

Drought and famine. Some communities are nomads in that they move away from their land in periods of severe drought and famine in search of water and food.

Marriage/Family

PULL FACTORS

Availability of better job opportunities. People seeking employment leave their homes to the places that they can access better opportunities.

Availability of better educational opportunities

Religious freedom. There are places in the world where free worship is not protected. People will flee from religious prosecution.

Political freedom. People are attracted to governments that exercise democracy as opposed to dictatorship.

Fertile land. People interested in farming are attracted by fertile lands.

Environmental safety. Places free from environmental hazards like flooding, earthquakes, tsunamis, and hurricanes attract a lot of

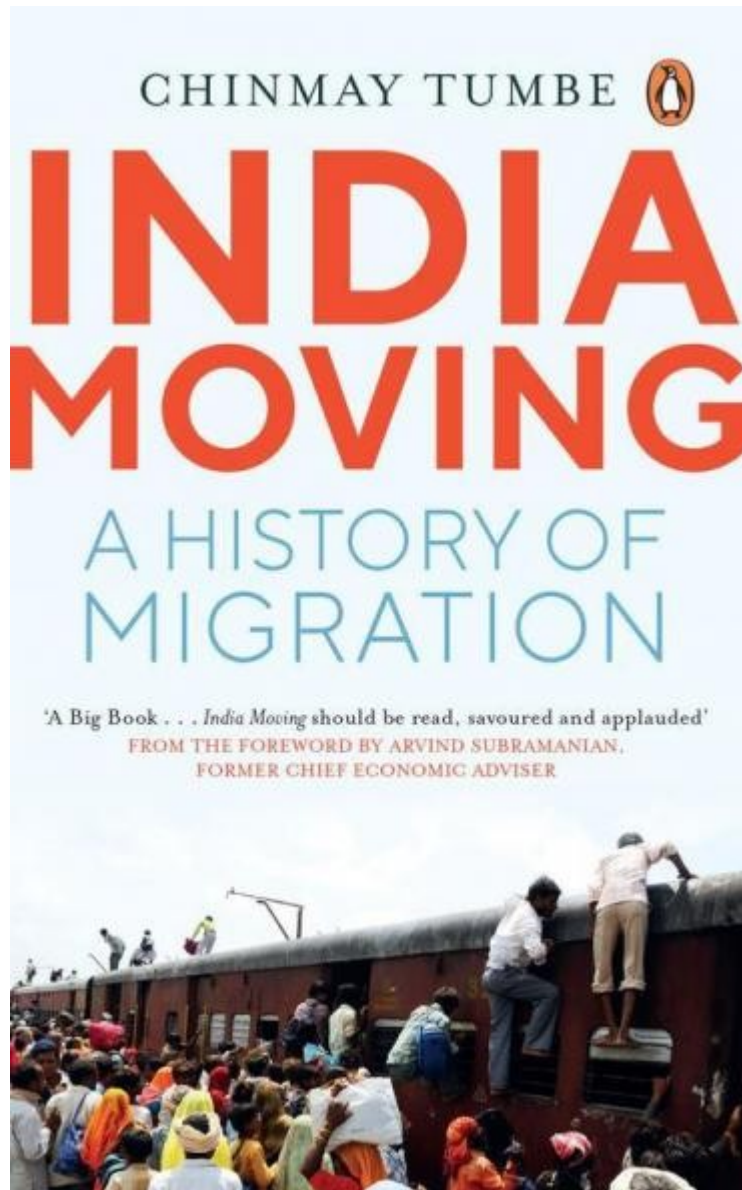

WHO IS A MIGRANT ?

Is a person who moves residence to another city block a migrant?

Is a person who works daily in another geographic unit a migrant?

Is the movement between the weekday home and the weekend home a migration?

Is a person who permanently moves to another city to live nearer to family a migrant?

INTERNAL AND INTERNATIONAL MIGRATION

Internal migration is when a person migrates to a new location within the same country, such as moving from a rural location to an urban location.

- In internal migration, a person who arrives in a geographically defined area is called an ***in-migrant***, while a person who leaves a geographically defined area is called an ***out-migrant***.

International migration is when an international border is crossed and the person takes up residence in a new country.

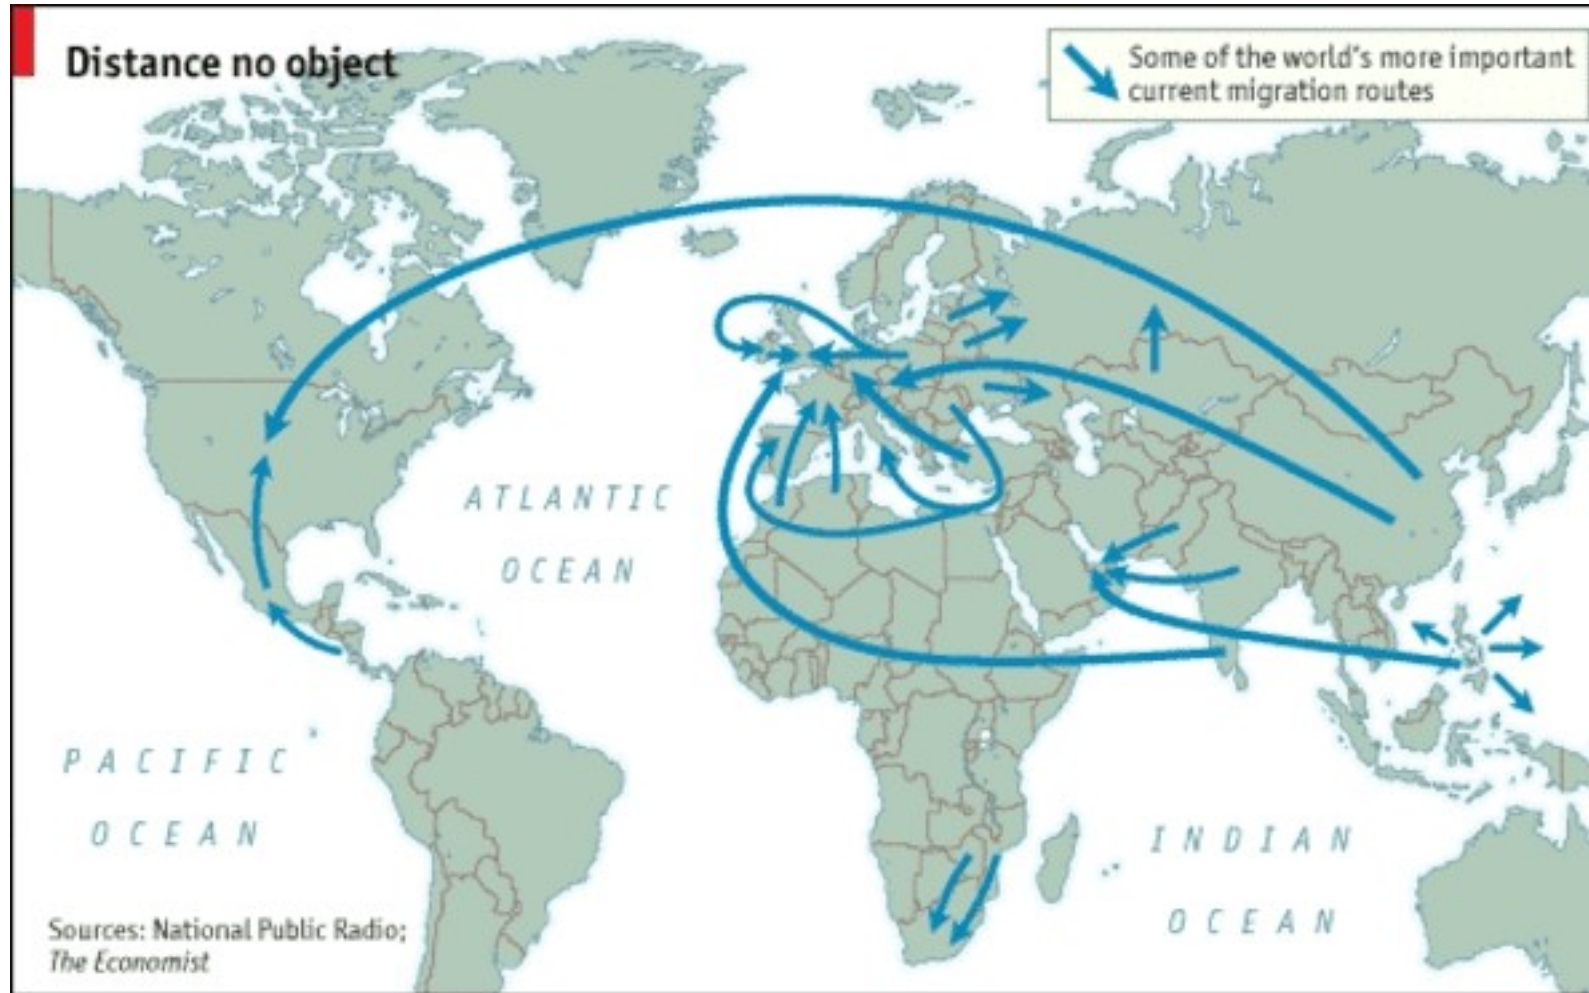

- A person arriving into a new country is called an ***immigrant***, while a person leaving a country is called an ***emigrant***.

GROSS VS. NET MIGRATION

Gross migration is the total flow of migrants across a border, i.e. **in-migrants + out-migrants**, or in the case of international migration, **immigrants + emigrants**.

Net migration is the difference between the inward and outward flows of migration, i.e. **in-migrants - out-migrants** or **immigrants - emigrants**.

UAE- POPULATION PYRAMID

DERIVING MIGRATION

Cross-tabulation

▢ duration of residence by place of birth

Primary – *Still living at the place of birth at a certain fixed date before the census (e.g. five years previously) but were living in another area on the census date.*

▢ There is no information about movements before the first fixed date, and so the individual may have already been a return migrant then.

Secondary – *Lived outside the place of birth at a certain fixed date before the census (e.g. five years previously) and were living in a third area on the date of the census.*

Return – *Lived outside the place of birth at a certain fixed date before the census and returned to it before the census date.*

A = PLACE OF BIRTH

**B = PLACE OF RESIDENCE AT FIXED PAST
DATE (E.G. 5 YEARS AGO)**

C = PLACE OF RESIDENCE AT CENSUS DATE

Type	B (Past)	C (Current)	Interpretati on	
Primary migrant	A	$C \neq A$	First move after birth	Birth (A) → Past (B) → Present (C) Primary: A → A → C
Secondary migrant	$B \neq A$	$C \neq B$ and $C \neq A$	Multiple moves	Secondary: A → B → C
Return migrant	$B \neq A$	$C = A$	Returned to birthplace	Return: A → B → A

MIGRATION DATA

Demographic Census

- ▢ **Place of birth**
- ▢ **Place of last residence**
- ▢ **Duration of residence in current location**
- ▢ Place of residence at a specific date prior to the census (e.g. five years previous)

75 – 79	194871	297289		
80 – 84	111021	187753		
85+	83521	140198		

SURVIVAL ANALYSIS

Difference between – closed population projection and actual measured population

The basic information we need is:

- Population by group of age (and sex if required and available) enumerated at two consecutive censuses – generally a ten year time interval.
- A set of survival ratios

Considering the ${}_nL_x$ function of an abridged Life Table, the functions ${}_5L_x$, ${}_5L_{x+5}$ and ${}_5L_{x+10}$ represent person-years lived between ages x , $x+5$, and $x+10$ and $x+15$, respectively.

If the ${}_5L_x$ corresponds to persons aged between x , $x+5$, then ten years later these persons will be represented by: ${}_5L_{x+10}$

$$S(x, x+10) = {}_5L_{x+10} / {}_5L_x$$

$$P(x + 10, t + 10) = P(x, t) * S(x, x + 10)$$

ESTIMATING MIGRATION BETWEEN CENSUS – SURVIVAL ANALYSIS

Age	Population 2000	Population 2010	Expected Population in 2010	Net Migration 2000/2010
0 – 4	1616152	1276720		
5 – 9	1682691	1429628		
10 – 14	1783325	1687608
